UNIVERSITY OF MINNESOTA
Driven to Discover™

From GPS and Google Maps to Spatial Computing

This course introduces concepts, algorithms, programming, theory and design of spatial computing technologies such as global positioning systems (GPS), Google Maps, location-based services and geographic information systems. Learn how to collect, analyze, and visualize your own spatial datasets while avoiding common pitfalls and building better location-aware technologies.

Preview Lectures

An illustration of a globe with various spatial computing elements overlaid. These include a yellow line representing a path or route, several red and blue location pins, and a network of lines connecting different points on the globe's surface.

It is only a start! Bigger Opportunities Ahead!

McKinsey Global Institute

Big data: The next frontier for innovation, competition, and productivity

The study estimates that the use of personal location data could save consumers worldwide more than **\$600 billion annually by 2020**. Computers determine users' whereabouts by tracking their mobile devices, like cellphones. The study cites smartphone location services including Foursquare and Loopt, for locating friends, and ones for finding nearby stores and restaurants.

But the biggest single consumer benefit, the study says, is going to come from time and fuel savings from location-based services — tapping into real-time traffic and weather data — that **help drivers avoid congestion and suggest alternative routes**. The location tracking, McKinsey says, will work either from drivers' mobile phones or GPS systems in cars.

From GPS and Virtual Globes to Spatial Computing-2020

About the workshop

This workshop outlines an effort to develop and promote a unified agenda for Spatial Computing research and development across US agencies, industries, and universities. See the original workshop proposal [here](#).

Spatial Computing

Spatial Computing is a set of ideas and technologies that will transform our lives by understanding the physical world, knowing and communicating our relation to places in that world, and navigating through those places.

The transformational potential of Spatial Computing is already evident. From Virtual Globes such as Google Maps and Microsoft Bing Maps to consumer GPS devices, our society has benefitted immensely from spatial technology. We've reached the point where a hiker in Yellowstone, a schoolgirl in DC, a biker in Minneapolis, and a taxi driver in Manhattan know precisely where they are, nearby points of interest, and how to reach their destinations. <http://answers.oreilly.com/topic/2815-how-devices-gather-location-information/>

Trends: Localization Indoors and Underground

- GPS works outdoors, but,
 - We are indoors 90% of time!
 - Ex. malls, hospitals, airports, etc.
 - Indoor asset tracking, exposure hotposts, ...
- Leveraging existing indoor infrastructure
 - Blue Tooth, WiFi, Cell-towers, cameras, Other people?
- How to model indoors for navigation, tracking, hotspots, ...?
 - What are nodes and edges ?

 - Queries => Persistent Monitoring
- Spatial Statistics
- Spatial Database Management Systems
- Virtual Globes
- Geographic Information Systems
- Conclusions

Location Based Services

- Open Location Services: Queries
 - Location: Where am I? (street address, <latitude, longitude>)
 - Directory: Where is the nearest clinic (or doctor)?
 - Routes: What is the shortest path to reach there?

Next Generation Navigation Services

- ❑ Eco-Routing
- ❑ Best start time
- ❑ Road-capacity aware

Static	Time-Variant
Which is the shortest travel time path from downtown Minneapolis to airport?	

Routing Challenges: Lagrangian Frame of Reference

Q? What is the cost of Path $\langle A, C, D \rangle$ with start-time $t=1$? Is it 3 or 4 ?

Snapshots of a Graph

Path	T = 0	T = 1	T = 2	T = 3
$\langle A, C, D \rangle$	4	3	5	4
$\langle A, B, D \rangle$	6	4	4	3

Lagrangian Graph

Details: A Critical-Time-Point Approach to All-Start-Time Lagrangian Shortest Paths: A Summary of Results, (w/ V. Gunturi et al.), Proc. Intl. Symp. on Spatial and Temporal Databases, Springer LNCS 6849, 2011. Complete results accepted for the IEEE Transactions on Knowledge and Data Engineering.

Spatio-temporal Graphs: Computational Challenges

Ranking changes over time

Violates stationary assumption in
Dynamic Programming

Time	Preferred Routes
7:30am	Via Hiawatha
8:30am	Via Hiawatha
9:30am	via 35W
10:30am	via 35W

Waits, Non FIFO Behavior

Violate assumption of Dijkstra/A*

Time	Route	Flight Time
8:30am	via Detroit	6 hrs 31 mins
9:10am	direct flight	2 hrs 51 mins
11:00am	via Memphis	4 hrs 38mins
11:30am	via Atlanta	6 hrs 28 mins
2:30pm	direct flight	2 hrs 51 mins

*Flights between Minneapolis and Austin (TX)

Details: A Critical-Time-Point Approach to All-Start-Time Lagrangian Shortest Paths: A Summary of Results, (w/ V. Gunturi et al.), Proc. Intl. Symp. on Spatial and Temporal Databases, Springer LNCS 6849, 2011. Complete results accepted for the IEEE Transactions on Knowledge and Data Engineering.

Trends: Persistent Geo-Hazard Monitoring

- Environmental influences on our health & safety
 - air we breathe, water we drink, food we eat
- Surveillance
 - Passive > Active > Persistent
 - How to economically cover all locations all the time ?
 - Crowd-sourcing, e.g., smartphones, tweets,
 - Wide Area Motion Imagery

Outline

- Introduction
- GPS
- Location Based Services
- **Spatial Statistics**
 - From Mathematical (e.g., hotspot)
 - To Spatial (e.g., hot features)
- Spatial Database Management Systems
- Virtual Globes
- Geographic Information Systems
- Conclusions

Hotel That Enlivened the Bronx Is Now a 'Hot Spot' for Legionnaires'

By WINNIE HU and NOAH REMNICK AUG. 10, 2015

Contaminated Cooling Towers

Five buildings have been identified as the potential source of the Legionnaires' disease outbreak in the South Bronx.

- Possible sources of Legionnaires' outbreak
- Additional sites found with legionella bacteria
- Locations of people with Legionnaires'

Source: New York Mayor's Office

By The New York Times

The Opera House Hotel is at the center of the outbreak. Edwin L. Torres for The New York Times

Spatial Statistics: Mathematical Concepts

- Spatial Statistics
 - Quantify uncertainty, confidence, ...
 - Is it significant?
 - Is it different from a chance event or rest of dataset?
 - e.g., SaTScan finds circular hot-spots
- Model Auto-correlation, Heterogeneity, Edge-effect,
 - Point Process, e.g., Ripley's K-functions, SatScan
 - Geo-statistics, e.g., Kriging, GWR
 - Lattice-based models

Semantic Gap between Spatial and Machine Learning

- Representation choices beyond Linear Algebra
- Environmental Criminology
 - Routine Activities Theory, Crime Pattern Theory, Doughnut Hole pattern
- Formulation: **rings**, where **inside** density is significantly higher than **outside** ...

Input

– Output: Ring Shaped Hotspot Detection (RHD)

Mathematics	Concepts	Relationships
Sets	Set Theory	Member, set-union, set-difference, ...
Vector Space	Linear Algebra	Matrix & vector operations
Euclidean Spaces	Geometry	Circle, Ring , Polygon, Line_String, Convex hull, ...
Boundaries, Graphs, Spatial Graphs	Topology, Graph Theory, Spatial graphs, ...	Interior, boundary, Neighbor, inside , surrounds , ..., Nodes, edges, paths, trees, ... Path with turns, dynamic segmentation, ...

Trends: Spatial-Concept Aware Patterns

- Spatial Concepts
 - Natural geographic features, e.g., rivers, streams, ...
 - Man-made geographic features, e.g., transportation network
 - Spatial theories, e.g., environmental criminology – doughnut hole
- Spatial-concept-aware patterns
 - Hotspots: Circle => Doughnut holes
 - Hot-spots => Hot Geographic-features

(a) Input

(b) Crimestat K-means with Euclidean Distance

(c) Crimestat K-means with Network Distance

(d) KMR

Details: A K-Main Routes Approach to Spatial Network Activity Summarization, (w/ D. Oliver et al.)
IEEE Transactions on Knowledge and Data Engineering, 26(6):1464-1478, 2014.

Co-locations/Co-occurrence

- Given: A collection of different types of spatial events
- Find: Co-located subsets of event types

Answers:

Details: Discovering colocation patterns from spatial data sets: a general approach, (w/ H. Yan et al.), IEEE Transactions on Knowledge and Data Engineering, 16(12), Dec. 2004.

Fast Algorithms to Mine Colocations from Big Data

Participation ratio $\text{pr}(f_i, c)$ of feature f_i in colocation $c = \{f_1, f_2, \dots, f_k\}$:
 fraction of instances of f_i with feature $\{f_1, \dots, f_{i-1}, f_{i+1}, \dots, f_k\}$ nearby
 (i.e. within a given distance)

Participation index $\text{PI}(c) = \min\{ \text{pr}(f_i, c) \}$

Properties:

- (1) **Computational:** Non-monotonically decreasing like support measure
 Allows scaling up to big data via pruning
- (2) **Statistical:** Upper bound on Cross-K function

■ Comparison with Ripley's K-function (Spatial Statistics)

K-function ($B \rightarrow A$)	$2/6 = 0.33$	$3/6 = 0.5$	$6/6 = 1$
PI ($B \rightarrow A$)	$2/3 = 0.66$	1	1

Cascading spatio-temporal pattern (CSTP)

- ❑ **Input:** Urban Activity Reports
- ❑ **Output:** *CSTP*
 - ❑ *Partially ordered* subsets of ST event types.
 - ❑ Located together in space.
 - ❑ Occur in *stages* over time.
- ❑ Applications: Public Health, Public Safety, ...

Details: Cascading Spatio-Temporal Pattern Discovery, (w/ P. Mohan et al.),
IEEE Transactions on Knowledge and Data Engineering, 24(11), Nov. 2012.

IEEE Transactions on Knowledge and Data Engineering, 20(10), Oct. 2008.

Outline

- Introduction
- GPS
- Location Based Services
- Spatial Statistics
- Spatial Database Management Systems
 - Scalability => Privacy
- Virtual Globes
- Geographic Information Systems
- Conclusions

Spatial Databases for Geometry

- Dice, Slide, Drill-down, Explore, ...
 - Closest pair(school, pollution-source)
 - Set based querying
- Reduce Semantic Gap
 - Clumsy code for inside, distance, ...
 - 6 data-types
 - Operations: inside, overlap, distance, area, ...
- Scale up Performance
 - Data-structures: B-tree => R-tree
 - Algorithms: Sorting => Geometric

Challenge: Privacy vs. Utility Trade-off

- Check-in Risks: Stalking, GeoSlavery, ...
- Ex: Girls Around me App (3/2012), Lacy Peterson [2008]
- Others know that you are not home!

The Girls of Girls Around Me. It's doubtful any of these girls even know they are being tracked. Their names and locations have been obscured for privacy reasons. (Source: [Cult of Mac, March 30, 2012](#))

Challenge: Geo-privacy, geo-confidentiality, ...

- Emerging personal geo-data
 - Trajectories of smart phones, gps-devices, life-trajectories and migrations, ...
- Privacy: Who gets my data? Who do they give it to? What promises do I get?
- Socio-technical problem
 - Need policy support
 - Challenges in fitting location privacy into existing privacy constructs (i.e HIPPA, Gramm-Leach-Bliley, Children's Online Privacy Protection Act)
- Groups interested in Geo-Privacy
 - Civil Society, Economic Entities, Public Safety ,Policy Makers

Table 4.2: Geo-privacy Policy Conversation Starters

GEOTARGETED
ALERTS AND WARNINGS

1. Emergencies are different (E-911)
2. Differential geo-privacy can improve safety (E-911 → PLAN, CMAS)
3. Send apps to data, not vice-versa (e.g., eco-routing)
4. Transparent transactions for location traces for increased consumer confidence
5. Responsible entities for location traces (Credit-bureau/census, HIPPA++ for responsible parties)

- Geographic Information Systems
- Conclusions

Virtual Globes & Volunteered Geo-Information

- Virtual Globes

- Visualize Spatial Distributions, Patterns
- Visual drill-down, e.g., fly-through
 - Change viewing angle and position
 - Even with detailed Streetview!

- Volunteered Geo-Information

- Allow citizens to make maps & report
- Coming to public health!
- People's reporting registry (E. Brokovich)
- www.brockovich.com/the-peoples-reporting-registry-map/

Virtual Globes in GIS Education

- Coursera MOOC: From GPS and Google Earth to Spatial Computing
 - 21,844 students from 182 countries (Fall 2014)
 - 8 modules, 60 short videos, in-video quizzes, interactive examinations, ...
 - 3 Tracks: curious, concepts, technical
 - Flipped classroom in UMN on-campus course

Opportunities: Time-Travel and Depth in Virtual Globes

- Virtual globes are snapshots
- How to add time? depth?
 - Ex. Google Earth Engine, NASA NEX
 - Ex. Google Timelapse: 260,000 CPU core-hours for global 29-frame video
- How may one convey provenance, accuracy, age, and data semantics?
- What techniques are needed to integrate and reason about diverse available

Outline

Nexus of Food, Energy, Water Security

- USA:
 - NSF: INFEWS, \$70M in FY16
 - Reports from OSTP, NIC, USDOE, ...
- Spatial computing is essential
 - Water census (USGS)
 - Local sourcing, virtual water trade
 - Precision Agriculture, ...
- Excerpt “Satellites provide the big picture”, **Science**, 349(6249):684-685, Aug. 14th, 2015.

Satellite observations have revolutionized our understanding of [hydrology](#), [water availability](#), and [global change](#), while catalyzing modern advances in [weather](#), [flood](#), [drought](#), and [fire prediction](#) in ways that would not have occurred with relatively sparse ground-based measurements alone. Earth-observing satellites provide the necessary “big-picture” spatial coverage, as well as the regional-to-global understanding essential for improving predictive models and informing policy-makers, resource managers, and the general public.

High-Capability Computing & Future of Virtual Globes

Recommendations

- Spatial Computing has transformed our society
 - It is only a beginning!
 - It promises an astonishing array of opportunities in coming decade
- However, these will not materialize without support
- Universities
 - Institutionalize spatial computing
 - GIS Centers, a la Computing Centers of the 1960's
 - Incorporate spatial thinking in STEM curriculum
 - During K-12, For all college STEM students?
- Government
 - Increase support spatial computing research
 - Larger projects across multiple universities
 - Include spatial computing topics in RFPs
 - Include spatial computing researchers on review panels
 - Consider special review panels for spatial computing proposals

Panel: Spatio-Temporal (ST) Computing Questions

Panel: Spatio-Temporal (ST) Computing Questions

- 13. What is missing from ... research agenda? What can be achieved in ... 5 years?
- 7. What are the major obstacles ... ?
- 6. What are promising data models for managing ST data?
- 8. Is it appropriate to model the temporal domain as 4th dimension?
- 4. What are the latest advances in ST computing?
- 14. What is the way to educate the next generation workforce with ST knowledge?

Handling Non-FIFO Behavior (Earliest Arrival Time Series Transformation)

Consider Travel time series

[3 3 1 1]
t= 0 1 2 3

STEP 1

Add time index to
travel time to
get arrival time series

Arrival time series

[3+0 3+1 1+2 1+3]
t= 0 1 2 3

[3 4 3 4]

STEP 2

Compare each value to the ones
on its right and choose the min

[3 3 3 4]
Earliest Arrival
time series

Observation:

➤ Earliest arrival time series is FIFO in nature.

Travel-Time vs. Earliest Arrival Time

Travel-Time-Series

Earliest Arrival Time -Series

Observation:

- Earliest arrival time series is FIFO in nature.
- Computing fastest path is easier with earliest arrival time-series
-

Basic concepts for *Critical-time-point*

- **Non-critical times:** Path ranking can't change.
- ***Critical-time-points:*** Time point where path ranking may change.

Candidate Paths
between A and D

<A,C,D>

<A,B,D>

<A,B,E,D>

Path Functions for time [0 3]

[4 4 7 7]

[6 6 6 6]

t=2

[9 9 9 9]

The ranking changes at t=2.
Thus t=2 becomes a
Critical time point

- Path ranking cannot change at *non critical-time-points*.

Q13. ST Education

- Tutorials
- Articles in Encyclopedia of GIS
 - Springer's (M. Yuan, K. Stewart, ...) , AAG's
- Survey Papers, book chapters
- Books
 - Choro-chronous (EU project), Moving Object Databases (Guting), Trajectory Processing (Y. Zheng), ...
- Courses
- Degree programs
 - Interdisciplinary graduate programs
 - NSF NRT (previously IGERT)
