Centre for Emerging Diseases

‘Centre for Emerging Diseases’ addresses the questions of molecular mechanism/pathogenesis/host pathogen interactions of emerging and re-emerging viral (Chikungunya & Chandipura) and bacterial pathogens (*Mycobacterium* and others) and life style diseases such as obesity & diabetes, cancer, cardiovascular and CNS disorders using both wet laboratory and tools of computational biology/bioinformatics (genomics, proteomics and evolutionary approaches). Research emphasis is also on peptide based therapeutics, regulatory peptides, biosensor and ELISA based diagnostics, and drug encapsulated nanoparticles and nanoemulsions.

Plant & Microbial Biotechnology

Plant & Microbial Biotechnology group addresses growing concern over environmental pollution, depleting natural resources and increasing demand of natural bio-products of therapeutic and industrial importance (food flavours-microbial production of Vanillin and probiotics; enzymes -Laccase, protease, tannase, polyphenol oxidase, keratinase from microbial sources, biosynthesis of chitosan, cellulose from microbial sources for bioprocess applications, bio-inoculants of plant and microbial origin for plant growth promotion and antibiosis, microbial remediation of organophosphate pesticides, biocatalyst for the removal of nitrogen and sulphur from petroleum products, phytoremediation of heavy metals-copper (Cu) and lead (Pb); screening for antimicrobial compounds-peptides/antibiotics).

31. Code of ethics for research followed by the departments

Department follows the code of ethics defined by the Institute. The ethics lays strong emphasis that all research work/theses must be original and work by others is duly acknowledged. To enhance quality of research anti-plagiarism software is used. Research scholars and students before submitting their Ph.D. theses, dissertations, Project reports and research papers for award/publications check manuscripts for plagiarism. Department has IBSC Committee (Institutional Biosafety Committee) constituted under the auspices of Department of Biotechnology, Govt. of India, which meets regularly to generate

awareness and monitor compliance of bio-safety aspects and regulations. IEC (Institutional Ethical committee), constituted following ICMR guidelines ensures that the research involving human subjects/samples is conducted in ethical ways.

41. Was any need assessment exercise undertaken before the development of new programme(s)? If so, highlight the methodology.

Before introducing a new programme or a course, a measured view is taken considering faculty expertise, laboratory infrastructure, new and emerging areas in the field and preference of industry for particular expertise/knowledge in biotechnology. Having observed the demand of students for M. Tech., both from outside Institutions and students of B. Tech. programme at JIIT, increasing trend of students opting for Integrated M. Tech. (Biotechnology) and recommendation of BOS Biotechnology, a two year M. Tech. programme in Biotechnology was launched in the year 2014.

42. Does the department obtain feedback from

i. faculty on curriculum as well as teaching-learning-evaluation? If yes, how does the department utilize the feedback?

Yes. Feedback from faculty is obtained during departmental meetings. Before setting departmental agenda for BOS and Academic Council, aspects of curriculum such as course content and learning expectations are discussed in departmental meetings.

ii. students on staff, curriculum and teaching-learning-evaluation and how does the department utilize the feedback?

At the end of every semester, student's feedback is collected for each subject about the faculty, course contents, and method of teaching and learning/understanding of contents. Feedback is communicated to concerned faculty for appropriate corrective actions.

iii. alumni and employers on the programmes offered and how does the department utilize the feedback?

Yes. Feedback from alumni is collected. Faculty also receives informal feedback from employers from time to time. Feedback is discussed departmentally and utilized appropriately.

Online feedback collection mechanism has been operationalized from Academic Session 2014-15 through Institute Quality Assurance Cell (IQAC).

46. How does the department ensure that programme objectives are constantly met and learning outcomes are monitored?

The Biotechnology curriculum lays focus, apart from subject area knowledge, on soft skills desired by Academia, Industry and R&D. The same is reflected in student's professional advancement (higher education/ employability/ entrepreneurship). Department assesses students through session tests (T1, T2, and End Semester Examination), Tutorials, assignments, presentations, and research oriented projects.

Apart from regular faculty meetings, the course curriculum, and course contents are periodically reviewed in Board of Studies (BOS-Biotechnology). A formal monitoring system for quality management has been started through IQAC from Academic Session 2014-15.

Department's beyond syllabus scholarly activities (**Annexure-IV/BT**) include

- Guest Lectures
- Seminars and Workshops

49. State whether the programme/ department is accredited/ graded by other agencies? If yes, give details.

Yes, the B.Tech. in Biotechnology programme was NBA accredited for 5 years (date of accreditation: 22.01.2008)

50. Briefly highlight the contributions of the department in generating new knowledge, basic or applied.

Department has been strengthening research activities through research grants from Govt organisations and funds and facilities from IIIT. Ph.D. scholars, JRF/SRF/RA's, students doing projects under the guidance of supervisors are involved in generation of new knowledge and contribution through publications as below:

No.	Name of the Event	2010	2011	2012	2013	2014	2015	Total
1	Research Papers							
	a. International	11	35	38	60	43	30	217
	b. National	2	1	1	1	-	-	5
2	Patents filed	1						1
3	GenBank submissions	4	11	5				20

Some of the major contributions of the Department in research and development (categorized under two thrust areas) are as follows:

Disease Biology: - 'Centre for Emerging Diseases' address questions of molecular pathogenesis of emerging viral and bacterial pathogens (host pathogen interactions, essential metabolic pathways of pathogens), life style diseases such as diabetes, cardiovascular diseases and the design of novel diagnostics and therapeutics.

1. Research is being carried out on emerging/re-emerging pathogens specifically Chikungunya (CHIKV) and Chandipura (CHPV) viruses. All the nine genes from an Indian isolate of Chikungunya Virus (CHIKV- IND-06-Guj) have been cloned, sequenced and analysed phylogenetically. The interactions among the four non-structural proteins have been mapped to the domain level speculating a computational model of the viral late replicase complex (sponsored by DBT). The host protein interactors of CHIKV (E1, E2 and nsP2 proteins) have been indentified by screening the human cDNA library using yeast two-hybrid system. Further the host interactors of all the nine viral proteins have also been predicted using a protein structure similarity based computational approach.

2. The intraviral interactions of encephalitis causing Chandipura Virus (CHPV) proteins have been studied (sponsored by DST). The cellular factors that associate with CHPV during viral pathogenesis have been predicted and the possible modes of neuroinvasion by the virus have been hypothesised. Further, the host protein interactors of the viral membrane proteins (Matrix and Glycoproteins) have been experimentally identified and peptide inhibitors are currently being validated.
3. In view of the rapid pace with which multidrug resistant strains of majority of pathogens are emerging, the need for new antibacterial compounds cannot be overemphasized. Research efforts have been initiated for early-stage rational drug discovery for a novel antimicrobial agent(s). Cloning and purification of novel drug targets from five human pathogens (responsible for infecting respiratory and/or gastrointestinal tract) have been achieved for determining their three dimensional structures.
4. Phylogenomics and Population Genomics study of Indian *Drosophila* species is being carried out (sponsored by DST) for inferring genetic inter-relationship among closely related species and to understand speciation events and adaptation with respect to different ecoclimatic zone in Indian *Drosophila*. Other research interests using this model system focus on aging and development, toxicology, ecological and behaviour genetics etc.
5. Innovations in novel drug delivery systems have resulted in improvement of the pharmacological and therapeutic properties of drugs. Polymeric Nanoparticles (chitosan, PLGA) containing encapsulated, dispersed, absorbed drugs have been synthesized to improve the delivery and bioavailability of some anti epileptic drugs, anti alzheimer's drugs and for some other CNS related disorders. Nanoemulsions encapsulating some natural antimicrobial compounds (catechins and flavanoids) are being investigated for enhanced efficacy and bioavailability.
6. Nanoparticles of metals and enzymes have been synthesized and exploited for development of biosensors with improved stability, sensitivity and response time. A nanoparticle based glucose biosensor has been developed under an AICTE funded research project. Currently thyroid biosensor and immunosensor for cancer diagnosis as point of care device development are being investigated.
7. Novel process to enhance thermal and pH stability of enzymes has been developed through nanoformulation. An Indian patent entitled "Novel process to enhance thermal stability of enzyme

nanoparticles” has been filed (Patent Application No 2782/DEL/2010).

8. The bioinformatic group of the department is carrying out research in the area of clinical data management, computational genomics, machine learning, *in-silico* target-ligand interactions and role of networks in pathogenic organisms and chronic diseases as evident by several publications journals, development of pipelines, databases and tools. A new multi-level system has been created to study a clinically relevant condition. A new semi-automated text mining system has been built to mine millions of bibliographic records. A functional model has been generated for drug activity (based upon multiple targeting interactions of the given drug towards a subset of nodes in the network). Metrics for leveraging more in Clinical Data Management in the context of vaccine trials has been generated.
9. Research is being carried out to study the cardioprotective potential of natural products where Curcumin, a polyphenol isolated from plant *Curcuma longa*, is found to suppress the gelatinase and GATA4 activities in norepinephrine induced stress in H9C2 cardiomyocyte. Another plant *S.cumini* is found to suppress glucose mediated cardiac cell death *in vitro* by inhibiting mitochondrial induced ROS production and apoptotic genes.
10. microRNAs profiling of libraries has been prepared from various stages of chick heart development using deep sequencing approach. A database of known and novel cardiomiRs and their targets has been prepared for wider use among researchers.
11. Any perturbation in mitochondrial metabolism may affect several organs and hence cause several diseases/disorders. In the last few decades the study about mitochondrial defects and its association with several neurological and metabolic disorders have gained lots of interest. Based on it, research is also being conducted to explore the mechanism of pathogenic role of mitochondria in common metabolic/lifestyle diseases like cancer and diabetes. Research is also being conducted to explore the possible mechanism behind the association between vitamin D deficiency and pathogenesis of type 2 diabetes.
12. Kidney stone formation is a complex process involving multiple factors. It has been assumed that inhibitors of urolithiasis have protective effect while stimulator helps in stone formation. Kidney stones invariably comprise a combination of inorganic crystals and organic macromolecules consisting principally of proteins, lipids and GAGs. There are many biomolecules that occur in stones, but their role in urolithiasis remains unknown. Interaction between cell

and crystal and their consequences is being investigated. Study of biomolecules present in kidney stone will help us in solving the mystery of stone formation.

Plant and Microbial Biotechnology research activities focus towards food technology, bioresources, healthcare, agriculture biotechnology and environmental remediation

13. Natural products of industrial importance from microbial and plant sources are being investigated. On-going work has resulted in screening, characterization and taxonomic identification of novel microorganisms from niche habitats (semi-arid, petrol-contaminated, arid desert soil and endophytic) for production of antimicrobial compounds, biosurfactants and enzymes.
14. Natural products and Ayurveda herbal remedies play a very important role in the new drug discovery and development. Role of herbal products for overcoming the toxic effect of tobacco smoke and environmental pollutants on cell lines and yeast model system has been investigated. The findings suggest that the plant extracts of *Salacia oblonga* and *Adhatoda vasica* as well as pure Mangiferin and Vasicine are able to overcome toxic effects of tobacco smoke and environmental pollutants.
15. Biorefining or biological upgradation is an interesting approach to remove nitrogen and aromatic content from fuels. Microorganisms have been isolated that are capable of expressing genes involved in the degradation of these contaminants present in fossil fuels.
16. Plant growth promoting microbes (PGPMs) can be used as an alternative to chemical fertilizers as well as to improve fertility (health) of degraded and marginal soils, to degrade xenobiotic compounds present in agriculture soils thus providing safe and pollutant free agriculture produce. A consortium of PGPM has been developed that can be used as bioinoculants (biofertilisers, biopesticides) to improve agriculture productivity.
17. Bioprocess parameters have been optimized for *in-vitro* propagation (using liquid cultures) of different medicinal plant *viz.* *Bacopa* sp., *Mentha* sp., and evaluated for their anti-oxidant property.
18. Microbial sources have been used as potential sources of biopolymers *viz.* cellulose and chitosan for development of cell culture surface and enzyme immobilization matrices. Microbial strains have been screened for been an alternative source of flavors via biotransformation.
19. Enzyme Keratinase produced by the isolated soil microbe and isolated in-house has found applicability in imparting anti-shrink

functionality to wool and works synergistically with other scale removing enzymes. This enzyme has been used by other researchers (Chakrabortya et al., 2014; Ind. J. Fibre & Textile Res.).
