JIIT NOIDA

B. Sc. (Honours/ Honours with Research/Academic Projects/Entrepreneurship) Computer Science

Course Description (B. Sc. Courses)

Introduction to Programming Using C (22B21MA111)

Introduction to Programming Using C will cover Introduction, Data types, Operators, and Control Flow, Array, Functions, Structures and Union, Pointers and File Handling.

		22B21M						Session 2022-23 m Jul 2022 to Dec	
Course N	lame	Introduc	tion to Pr	ogramming Us	sing C				
Credits		3			Contact	Hours	3-0	0-0	
		Coordin	ator(s)	MS. DEEPTI	SINGH				
		Teacher(s)						
		(Alphabe	tically)						
COURSI	E OUTC	OMES						COGNITIVE LE	VELS
After pur	suing the	above-me	ntioned co	urse, the studer	nts will be	able to:			
CO1	CO1 Explain various data types, memory allocation schemes, precedence of arithmetical and logical operations, and need of array, and structures Understand							Understanding Lev	vel (C2)
CO2		v the flow o							
CO3		y and imp rent proble	and implement functions with or without pointers for typroblems Applying Level (C3)						
CO4		onstrate and implement various operations like traverse, Applying Level (C3) tion, deletion, etc. on files							23)
Module No.	Title of Modul		Topics in	the Module					No. of Lectures
1.	Introdu	ection	<mark>problems</mark>	ion to Logic building, Step by step solution to simple, developing logic/flow- chart/pseudo code to solve like simple/logical games, puzzles.					9
2.	Data ty Operate Contro	ors, and	Data, va unary, te	riables and co ernary, operators, if, if-else, v	nstants, da r preceden	ata types ace, oper	, op atio	perators – binary, ns using different switch-case in C	9
3.	Array Fundamentals of A related operations programming usin				nsertion, tra	aversal, u			6
4.	Functi	ions	Introduct	ion to Functions and its implementation in C ming language, Functions using Pass by value, recursive					4
5.	Struct and U		programminsertion,	ion and implementation of Structures and Union in C ning, Array of Structures and related operations like traversal, updation, etc. in C programming using problems, Function using structures					4

6.	Pointers	Pointers in C, Dynamic memory allocation for 1D/2D array and	6
		structures, Arithmetical operations on pointers, functions using	
		pass by reference	
7.	File Handling	Introduction to File, creation of files in C programming	4
		language, Modes of File Handling like read, write, update;	
		different types of files like binary file and text file and	
		respective operations like, opening, closing, reading, writing,	
		end of file.

Project based learning: Project is an integral part of the Subject. Student form group size 3-4, and discuss the project idea with their faculty before finalizing. All projects are based on hardware and hardware components. Programming language is used as per processor/controller. Students develop projects/prototypes to interact with physical environment, control physical object with software. Students learn various processor architecture as well as their programming languages.

Retardation Plate, Optical activity,								
2.	Relativit	Polarimeter. Resolving Power of Microscope. Frame of references, Galilean Transformations, Michelson- Morley experiment, Lorentz transformations, Addition of velocities, Mass variation with velocity, Mass-energy relation.								
3.	velocities, Mass variation with velocity, Mass-energy relation. Origin of spectral lines, spin and orbital angular momentum, Quantum numbers, Designation of States, Atoms in magnetic field, Zeeman effect.									

4.	Radiation	Black body radiation, Wein's law, Rayleigh Jeans law, Implications of Bose-Einstein statistics, Planck's law of radiation, Wein's Displacement Law.	5
5.	Quantu m Mechani cs	Wave-particle duality, Compton scattering, Matter waves, Heisenberg's uncertainty principle, Schrödinger wave equation and its applications to the free particle in a box (1D+3D), potential barrier and tunnel diode as its application	
		Total number of Lectures	42

<u>Project Based Learning (PBL):</u> The students will be given small projects (in groups) on various topics like Interference, diffraction, polarization, relativity, radiations, Quantum mechanics, to explore their applications in engineering, and technology to understand the role of physics. This will help the students to connect the concept studied in the class with their application in engineering and technology and will enhance their analytical skills.
