The students in the group of 3-4 submitted a case study of the Real-World Operating System like Windows, Linux, Macintosh etc. which was best suited for their mini project developed in their 5th semester. In the case study, they explained all the major components and services provided by the Operating system used for their mini project. This gave the students an exposure of the various components and services of real-world operating systems and helps them to map these services with the concepts taught in the subject and which further motivates them in the futuristic designing of a new Operating System.
